Environmental policy

Production is central for Weland Stål AB and for us is compatible with good environmental consideration. We carry out effective environmental work by constantly developing our production processes to achieve better utilisation of materials and energy. Weland Stål will endeavour to minimise its impact on the environment to achieve sustainable development. The environmental work will provide Weland Stål with market-related and financial benefits, and customers will view us as an environmentally aware alternative.

Mainstays for our environmental work:

- Conserve energy and natural resources
- Residual waste must be minimised, sorted at source and as far as possible recycled
- Satisfy or exceed environmental requirements set out in laws and ordinances, and comply with other requirements that relate to us
- Prevent environmental risks
- Use modern technology
