

## 30-year warranty on standard products

### Scope

The warranty covers standard products sold after 1 January 2015.

Weland Stål only provides a full warranty on complete systems supplied by us.

In systems that have been built using parts produced and sold by other manufacturers, only a limited warranty on constituent components applies.

Weland Stål is entitled to conduct inspections on site before any claim is approved.

Weland Stål replaces damaged parts with new material delivered the assembly site at not cost.

Weland Stål is entitled to carry out the replacement work using its own or personnel contracted from a third party.

### Surface treatment

Weland Stål guarantees the service life of the surface treatment on all standard products when used in normal environments and with the prescribed maintenance intervals:

- Hot-dip galvanized steel conforming to SS-EN ISO 1461.
- Stainless steel version.
- Copper version.
- Magnelis.
- Powder-coated version.

### Material and function

Weland Stål guarantees the service life of the material and function of all standard products when used in normal environments and with the prescribed maintenance intervals:

- Roof safety products.
- Railings.
- Solar panel mounts.
- Evacuation products.
- Powder-coated version.

### Criteria

The owner of the material must be able to verify it was purchased from Weland Stål with the help of a delivery note or invoice. The term "normal environment" refers to corrosivity class C4 (Atmosphere with marked air pollutant levels or with moderate salt levels, industrial and coastal areas).

The installation must have been carried out in accordance with the installation instructions applicable at the time of installation. Information received pertaining to dimensioning must match the relevant installation. Any metal shavings from the installation must be removed immediately. Damage to the surface treatment that occurred during installation must be touched up with suitable paint.

### Maintenance and inspection

Under the provisions of the Swedish Planning and Building Act (PBL) and the Swedish Act on Technical Requirements for Construction Works, products that are subject to stringent requirements in respect of their inherent characteristics must be inspected on a regular basis. Weland Stål recommends that this is done annually. The purpose of the inspection is to detect faults and/or defects that may have occurred due to weather, other damage or poor installation, and to take appropriate corrective action before the fault worsens.

Inspection points:

- Check to ensure that devices have been installed in accordance with Weland Stål's installation instructions.
- Any damage to products must be touched up.
- Where there is a risk of overload due to snow, any snow accumulations must be removed.
- Deformed and/or damaged devices/attachments must be replaced. Check whether the building has taken damage or if a risk of leakage has arisen.
